

**CLAIM AMENDMENTS:**

1. (currently amended) A lamp (24) comprising a holding device (2) for a luminous element (1) and a housing (3) which, at least partially, surrounds an interior space (11) provided for the luminous element (1), the housing (3) featuring an upper housing part (5) and a lower housing part (4), wherein a least one gap (7) exists between the upper housing part (5) and a lower housing part (4) through which air exchange is possible between the interior space (11) of the lamp (24) surrounded by the housing (3) and the external space, and further wherein the upper housing part (5) features a first reflector (9) and the lower housing part (4) features a second reflector (8) which are each partially transparent.

2. (currently cancelled)

3. (currently amended) The lamp (24) as recited in ~~the preceding~~ Claim 1, wherein the upper housing part (5) and/or the lower housing part (4) ~~is/are~~ are/is connected to connecting means (10) in an easily detachable manner.

4. (currently amended) The lamp (24) as recited in ~~one of the preceding~~ Claims Claim 3, wherein the connecting means (10) have noses (19) which frictionally and positively engage with the upper housing part (5) and/or with the lower housing part (4).

5. (currently amended) The lamp (24) as recited in ~~one of the preceding~~ Claims Claim 3, wherein the lower housing part (4) has a two-part design, featuring a carrier body (6) to which the reflector (8) is detachably connected and which is held in its position relative to the upper housing part (5) by the connecting means (10).

6. (currently amended) The lamp (24) as recited in ~~one of the preceding~~ Claims Claim 5, wherein the lower housing part (4) and/or the reflector (8) are connected to the carrier body (6) and the connecting means (10) via a simple knurled screw (28).

7. (currently amended) The lamp (24) as recited in ~~one of the preceding~~ Claims Claim 5, wherein the at least one gap (7) runs (horizontally) parallel to the carrier body.

8. (currently amended) The lamp (24) as recited in ~~one of the preceding Claims~~ Claim 1, wherein the at least one gap (7) is sized such that at least one of the reflectors (8, 9) fits through it.

9. (currently amended) The lamp (24) as recited in ~~one of the preceding Claims~~ Claim 1, wherein two gaps exist which are parallel to each other.

10. (currently amended) The lamp (24) as recited in ~~one of the preceding Claims~~ Claim 1, wherein the upper housing part (5) has a convex design with respect to the interior space (11) of the housing (3).

11. (currently amended) The lamp (24) as recited in ~~one of the preceding Claims~~ Claim 1, wherein the upper housing part (5) is transparent.

12. (currently amended) The lamp (24) as recited in ~~one of the preceding Claims~~ Claim 1, wherein the lamp is able to swivel about an axis (23) parallel to the at least one gap (7).
